

RECYCLE SMARTER

5 Cost Saving Strategies

This new financial year, there's no better time to take a closer look at your waste management strategy. Reviewing your current setup can uncover hidden costs, highlight inefficiencies, and create opportunities for smarter, more sustainable savings across your business. At Wanless, we work closely with businesses of all sizes to reduce waste-related costs, improve environmental performance, and simplify service delivery through the following proven strategies:

Audit Waste Streams to Eliminate Inefficiencies

We'll review the types of waste you're generating and how it's currently being managed. Often, businesses pay for unnecessary pickups or throw valuable recyclables in general waste. Even something as simple as a bin lid can reduce costs. A tailored audit identifies opportunities to:

- Reduce collections
- Improve sorting
- Divert materials into cheaper recovery streams
- Optimise waste setups across your sites

Consolidating Services to Avoid Hidden Charges

Many businesses rely on multiple suppliers for general waste, skips or specialist bins – leading to duplicate fees, clashing schedules and inconsistent service. We simplify the process, saving you time, money and admin headaches. Ask about our:

- Single, streamlined contract
- One invoice
- Smarter scheduling
- Transparent pricing

Divert Waste from Landfill

Landfill is expensive – for your budget and the environment. We help you shift more waste into recycling or organics, cutting weight-based charges and in some cases, avoiding landfill fees entirely. We can help you:

- Cut weight-based charges
- Reduce environmental impact
- Eliminate landfill fees entirely, in some cases

Maximise Recycling

Materials like cardboard, timber, metal and food waste cost less to dispose of, and can often be sold or offset. Simple, consistent recycling systems across your site boosts recovery and reduces costs. Let us help you:

- Set up simple, site-wide recycling systems
- Install clear signage
- Make sorting easy and consistent

Track Waste Data to Support ESG & Compliance Reporting

Sustainability and ESG reporting is no longer optional. Our tools give you clear, accurate waste data to track progress, report on targets and stay compliant – saving you time and reducing risk.

Wanless can:

- Measure diversion rates
- Track progress over time
- Provide auditable data for compliance and stakeholder reports

Planning next year's budget or chasing last-minute savings? Let Wanless help you clean up your waste – and your bottom line.
