

Commercial Waste Cost Review Checklist

Is your current waste service still the right fit?

Commercial waste costs can change over time as your business grows, your waste mix changes, collection frequency increases or your site becomes harder to service. Use this checklist to identify areas that may be worth reviewing with your waste provider.

Bin Size and Utilisation

- ☐ Our bins are usually close to full when collected.
- ☐ We are not routinely paying for bins that are only partly filled.
- ☐ Our bins are large enough to avoid regular overflow.
- ☐ Our current bin sizes still reflect the amount of waste our business produces.

Waste Type and Weight

- ☐ We understand which waste streams are included in our service.
- ☐ Heavy materials are not being placed into bins intended for lightweight general waste.
- ☐ We understand any weight limits or overweight charges that apply.
- ☐ Materials such as cardboard, metals, food waste or other recoverable streams are separated where practical.

Is the Service Still Fit for Purpose?

- ☐ Our current service reflects the way our business operates today.
- ☐ Our waste service has been reviewed within the past 12 months.
- ☐ Changes in staff numbers, tenants, production or operations have been reflected in our service.
- ☐ We receive enough information to understand where our waste goes and how our service is performing.

How did your site perform?

If you answered 'No' or 'Not Sure' to some of these questions, call us for a FREE waste service review.

Collection Frequency

- ☐ Our collection schedule matches our actual waste volumes.
- ☐ We are not receiving more collections than we need.
- ☐ We do not regularly require additional or emergency collections.
- ☐ Seasonal peaks or quieter periods are reflected in our service schedule where appropriate.

Contamination

- ☐ Staff and contractors know what belongs in each bin.
- ☐ Our recycling bins are not regularly contaminated with general waste.
- ☐ Prohibited materials are clearly communicated to staff and contractors.
- ☐ We understand whether contamination can result in additional charges.

Site Access

- ☐ Collection vehicles can access our bins without unnecessary delays.
- ☐ Bins are not regularly blocked by parked vehicles, gates or equipment.
- ☐ Collection windows are practical for both our business and the service provider.
- ☐ Bins are presented or positioned correctly for collection.

Invoicing and Additional Charges

- ☐ We understand the main charges appearing on our waste invoices.
- ☐ Any additional charges are clearly explained.
- ☐ We understand how disposal, processing, weight or contamination charges are calculated.
